

You have to create a Simple Mobile/PC AR Application and the **Theme is Tourism**. Application can be very simple one to visualize the above aspect.

Guidelines:

1. Each member should create an AR application to display one artifact.
2. Next step is to combine all projects to a one single application.
3. Note that if you want you can use **different markers to display multiple objects in a single app or if you want you can tryout Markerless AR approach**.
4. Each artifact must be labeled with the artifact name and the group member's name under the artefact in the augmented reality environment.
5. Create a report including the following and upload it to the course web.
 - a. Description of each member's contribution to the application.
 - b. Screen shots of individual applications and the final application (try to render all objects in one single view).
 - c. Codes of individual applications and the final application.
 - d. Make a small writeup about a real-life problem where you can apply AR technology to solve it. Discuss within the group to identify it.
6. You may refer the following links.
